DETAILED ACTION

Drawings

1. The drawings are objected to because the reference number '40' is shown twice in Figure 3. Once for the axis and again for the opening in the bearing 30 (examiner believes the opening should be '44'). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claim 1-3, 5-17 and 19-22 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

It is not understood how the device would function in light of the new limitation. "a bearing assembly... permitting rotation of said retaining member about said axis relative to said generally cylindrical member". As outlined in the specification (page 10, line 25-page 11, line 9) and as is commonly known with bayonet-type connections, the protuberances are inserted through the slots and then turned a partial revolution to misalign the protuberances and slots, thus locking the connection in place. The continued revolution of the joint however, will re-align the protuberances and slots at a set interval (every 90 degrees, every 180 degrees, 360 degrees, etc...) as the revolution continues. Each time the re-alignment occurs, protuberances can or will fall through the slots and disengage, causing the device to fall apart. As shown in the drawings and as claimed, the device does not appear to have any feature to keep the retaining member locked in place during operation where the gear is rotating. Absent any structure disclosed by applicant that would prevent this re-alignment from causing the gear

Art Unit: 3682

assembly to fall out of the housing, it is unclear how the device would successfully function.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-3, 5-17 and 19-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim language amended into claims 1,12 and 19 regarding "a bearing assembly... permitting rotation of said retaining member about said axis relative to said generally cylindrical member" is indefinite because it does not set forth any structure which facilitates permitting the rotation of the retaining member.

Response to Arguments

6. Applicant's arguments with respect to claims 1-3, 5-17 and 19-22 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 3682

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Justin Krause whose telephone number is 571-272-3012. The examiner can normally be reached on Monday - Friday, 7:30-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Ridley can be reached on 571-272-6917. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
